

In case of large x to reduce the array dimensions

For $x > \text{XXMAX}$, where $\text{XXMAX}=10.0$ in `nlcpst0.f`, `nlcpgn00.f`,

$\bar{x} \equiv \ln(x_{\max}/x) / \ln(x_{\max}/x_{\min})$ with $0 \leq \bar{x} \leq 1$

$x_{\max}/x_{\min} = \text{XRMAX}=1.0D5$ in `nlcpst0.f`, `nlcpgn00.f`

$L_x \equiv \ln(x_{\max}/x_{\min})$

$x = x_{\max} e^{-\bar{x} \ln L_x}$

$\bar{x} = \frac{LM(L)}{LM(MLM)}$ in `nlcpst0.f` and $x_{\max} = LM(MLM)$

$PL = MLM \cdot \ln(x_{\max}/x) / \ln(x_{\max}/x_{\min})$ in `nlcpgn00.f`
